

PlaySmart

Phase 4: High-Fidelity Design and Evaluation

Human Computer Interaction

Team Members: Usman Wajid, Ahmad Masood, Abdulrehman Naseer

Instructor: Arslan Asif

Date: April 2026

1. Introduction

PlaySmart is a football training management platform designed to help individual players and coaches organize, track, and optimize their training sessions. It enables users to browse drill libraries, plan structured training sessions, track performance progress, and prepare for matches — all through a cohesive mobile interface.

This document presents the Phase 4 deliverables for the Human Computer Interaction course. It focuses on a high-fidelity design assessment of the PlaySmart prototype, evaluating both its visual design and interaction quality. In addition, a formal heuristic evaluation has been conducted using Nielsen's 10 Usability Heuristics to systematically identify usability strengths and areas for improvement. Together, these analyses aim to provide a comprehensive understanding of the platform's user experience and design effectiveness.

2. High-Fidelity Design

This section evaluates the PlaySmart prototype against each requirement listed in the Phase 4 assignment brief. Each criterion is assessed as Met, Partially Met, or Not Met, with observations grounded in the actual screens produced.

2.1 Typography

Status: Met

The design consistently uses a modern, clean typeface combination across all 14 screens, creating a cohesive and professional visual identity. Space Grotesk is used for display headings and large performance statistics, giving the interface a bold, athletic feel. Inter is used for all body text, labels, and secondary content, ensuring excellent readability at smaller sizes.

A clear typographic hierarchy is maintained throughout: large H1 headings for screen titles (e.g., "Player Dashboard", "Speed Training"), well-defined H2 section headers for

organizing content within screens, and smaller body text for descriptions, drill instructions, and metadata. All-caps labels are used consistently for metadata tags (REPS, SETS, BPM, DURATION), creating a clear visual distinction between content types.

An especially strong design decision is the use of contrasting font weights — bold headings against regular body text — which guides the eye through the information hierarchy naturally. The volt-green (#CAFD00) accent color on key text elements (like CTA labels) further reinforces the visual hierarchy without relying solely on font size.

Figure 1: Welcome Screen – Typography hierarchy with Space Grotesk headings

Figure 2: Speed Training Detail – All-caps labels for REPS/SETS metadata

2.2 Color

Status: Met

A coherent and purposeful color palette is applied consistently across all screens, contributing to a clear and visually stable interface. The design uses a dark mode foundation (#0E0E0E charcoal background) paired with high-contrast light text (#FFFFFF), ensuring strong readability and reducing visual strain during extended use — particularly important for athletes checking their phones in bright outdoor conditions.

A distinct volt-green (#CAFD00) is used as the primary interactive color and is consistently applied to key call-to-action elements such as “Get Started,” “Start Training,” and “Enter Training Facility,” as well as active navigation states and progress indicators. This consistency helps users quickly identify interactive components and reinforces predictable behavior across the interface.

Semantic color usage is handled effectively to communicate system states. Green indicators are used for completion status and successful actions. Orange/amber communicates in-progress or warning states (e.g., medium fatigue levels in Match Preparation). Red (#FF7351) is reserved for error states, destructive actions, and high-fatigue alerts. This disciplined use of color strengthens feedback clarity and aligns well with established usability conventions.

2.3 Grouping

Status: Met

All five principles of screen design and layout are actively applied across the prototype:

Grouping: Related elements are grouped into distinct cards and sections. The Player Dashboard organizes quick-action cards in a 2×2 grid. The Settings screen groups options into distinct categories (Notifications, Preferences, Account). The Match Preparation screen groups checklist items and team readiness as separate visual blocks.

Ordering: Forms and content follow natural reading order from top to bottom. The Training Detail screen positions drill name above description above exercise list above action button. The Drill Library shows category filters above the search bar above drill results.

Alignment: Left-alignment is consistently used for content-heavy screens (Dashboard, Drill Library, Progress). Center-alignment is used for the Welcome screen's hero text and the Training Completed screen's celebratory summary to create visual focus.

Whitespace: Generous internal padding is applied within all cards and sections, preventing visual clutter. The dark background with tonal layering (#0E0E0E → #1A1A1A → #262626) creates visual breathing room between sections without explicit divider lines.

Decoration: Decoration is minimal and purposeful. The volt-green accent (#CAFD00) is used only for interactive elements and active states. No gratuitous gradients or drop shadows are applied. Status indicator colors (green/orange/red) serve as functional, not decorative, signals.

2.4 Navigation Paths

Status: Met

All navigational paths within the system are covered by the prototype. The complete user journey from first visit through to active usage is represented:

- Welcome Screen → Login / Sign Up
- Login → [correct credentials] → Player Home Dashboard
- Dashboard → Training Categories → Speed/Shooting/Tactics → Drill Detail → Start Training → Training In Progress → Training Completed
- Dashboard → Drill Library → Filter/Search → Drill Card
- Dashboard → My Progress (via bottom nav) → Weekly/Monthly stats
- Dashboard → Match Preparation → Checklist + Team Readiness
- Coach Dashboard → Create Session → Training Calendar
- Profile & Settings → [save changes] → Success Toast → Dashboard

All inner screens include a persistent bottom navigation bar with 5 tabs (Home, Drills, Plan, Progress, Profile), ensuring no dead ends exist within the prototype flow. The active tab is highlighted with the primary volt-green color.

Figure 8: Coach Dashboard – Role-specific navigation with all paths accessible

2.5 UI Elements

Status: Met

All required UI elements are present and integrated into the prototype:

Dialog Boxes: The 'Delete Training Session?' confirmation dialog is a fully designed modal overlay with a title, descriptive warning text, and two action buttons ("Cancel" and "Delete"). The dialog uses the error color (#FF7351) for the destructive action to clearly indicate risk.

Progress Indicators: The Training In Progress screen displays a real-time circular timer with current exercise name and progress. The Player Progress screen shows a 75% circular progress ring and a daily activity bar chart. The Profile/Settings screen includes a "Syncing training data... 65%" linear progress bar.

Message/Toast Notifications: Three distinct toast notifications are designed: (1) green success toast for "Session saved successfully!", (2) red error toast for "Failed to sync data. Please check your connection," and (3) informational feedback for completed actions. These serve as the system's primary feedback mechanism for user-triggered actions.

2.6 Realistic Content

Status: Met

Placeholder text such as 'Lorem Ipsum' is entirely absent from the prototype. All content is realistic, meaningful, and domain-appropriate for a football training platform:

- Player names: Ahmad Masood, Coach Arslan
- Training categories: Shooting, Speed, Tactics
- Drill names: Sprint Intervals, Ball Control Mastery, Passing Triangle, Agility Ladder
- Exercise details: 10× Jump-Jacks, 10× Sprint, 5× High-Knees
- Progress stats: 12 Sessions, 8.5 Hours, 47 Drills, 75% weekly goal
- Match prep items: Fitness Check, Tactical Drills, Warm-up Plan, Mental Readiness
- Fatigue indicators: Low (green), Medium (orange), High (red)
- Calendar events: Speed Training (Mon 9AM), Team Tactics (Wed 3PM)
